UPDATE ON SAIF April 2021:

Things are slowly but surely coming together as we prepare to welcome our newest member of the family; the 70-MeV cyclotron. The picture below was taken less than a month ago. We received feedback that the Factory Acceptance Testing (FAT) is scheduled to take place in June with installation scheduled for mid-October 2021.

Construction work is scheduled to commence in May as soon as the construction work permit is issued by the City of Cape Town. The contractors, Stefanutti Stocks, will be setting up their site office on the grass area next to C-block and the entrance to the Visitor's Centre.
